#1

● Critical ▾

Rename "Rental Item" to "Fleet Item"

2 ▾

⋮

● Critical ▾

Update labels: Makes users align to new terminology. Makes data model discussions easier.

⋮

● Critical ▾

Update tables, objects, etc.: Important for long-term alignment.

#2

● Critical ▾

Brownfield / Adoption Blockers

9 ▾

⋮

● Critical ▾

Batch tracking: Make batch tracking optional.

⋮

● Critical ▾

Existing inventory: Create fleet item from existing inventory.

⋮

● Critical ▾

Consolidate fleet location and inventory location/warehouse: incl. on-hand availability across fleets and inventory/rental

⋮

● Critical ▾

S/N: Serial entry at receipt vs. PO time. Most companies don't know VIN/serial at PO creation - only at receipt.

⋮

● Medium ▾

Existing Fixed Asset: Associate an existing Fixed Asset with a fleet item.

⋮

● Medium ▾

Existing Fixed Asset: Create new fleet item from existing Fixed Asset.

⋮

● Medium ▾

S/N: Make S/N optional.

⋮

● Medium ▾

Standard FA-from-PO-line conflicts with transfer process: If customer uses standard D365 FA creation on PO line, the rental transfer process tries to create a duplicate FA.

⋮

● Medium ▾

FA creation timing must be configurable: Some companies want FA at receipt; others at invoice. Current transfer-to-FA process is fixed.

#3

● Critical ▾

Bulk Items

10 ▾

⋮

● Critical ▾

Allow bulk item quantity different from 1: On quotes, contracts, POs, fleet transfers, FA, item movements, etc).

⋮

● Critical ▾

Incorporate bulk items into availability view: One line per bulk item type with quantity,

⋮

● Critical ▾

FA process for bulk: One FA per unit vs. one FA for all; no transfer-to-FA path for bulk → items stuck in inventory limbo

⋮

● Medium ▾

Allow bulk partial returns: cannot return 3 of 5 units on a single line

⋮

■ N/A ▾

~~qty=2 on quote allowed for pricing, but on activation throws "only one rental item per contract line"~~

- ☐ N/A ▼ ~~PO for bulk: qty > 1 on PO line not allowed when item is a rental item — system overwrites to 1~~
- ☐ N/A ▼ ~~"FROM" error on contract activation with bulk items (system doesn't know location)~~
- ☐ N/A ▼ ~~No qty tracking in movements — bulk items move as a group, not unit-by-unit~~
- ☐ N/A ▼ ~~No bulk availability view — no way to see how many units are available for a class~~
- ☐ N/A ▼ ~~No split-load support for bulk items across different drop-point addresses~~

#4 Critical ▼ AI skills & Rental UX outside of F&O 1 ▼

- Critical ▼ **Expose entities and actions as agent skills:** Agent needs to be able to query availability and prices, create quotes, contracts, CRUD jobsites, etc.

#5 Medium ▼ Configurability (incl. configurable fleet types) 2 ▼

- Medium ▼ **Fleet types as configurable table (not enum):** Improves transparency and enables Deere non-fixed assets rental fleets.
- Medium ▼ **Status codes as self-definable lists (not fixed enums):** Both Physical status and Service status. Loxam wants their own status terminology.

#6 Medium ▼ Improved search (free text, configurations and features, AI search) 0 ▼

#7 Medium ▼ Intercompany 4 ▼

- Medium ▼ **Intercompany rental processes:** Needed for multi-entity deployments.
- Medium ▼ **Global equipment card concept:** Sycor model — a global equipment master (manufacturer info, descriptions) with LE-specific rental details underneath. Needed for multi-LE deployments and intercompany.
- Medium ▼ **Global descriptions, manufacturer info, model specs:** Need to exist once and flow to all LEs. LE-specific rental details possible
- ☐ N/A ▼ ~~Asset maintenance (inspection intervals, service schedules, warranty templates) should be at the global/model level~~

#8 Medium ▼ Re-Rents 5 ▼

- Critical ▼ Preview build broken (WIP per Benjamin)

- Medium **Intercompany re-rent process:** (renting from a sister entity)
- Medium **Internal re-rent:** financial dimensions not available on RentalLocation (only on InventSite — which was removed)
- Medium **External re-rent:** process unclear; PO-to-contract workaround only
- Medium **Damage responsibility on return from external re-rent:** no defined process

#9

Medium Automation Gaps

13

- Medium **Enable item movements for purchases and sales:** Inspections, etc.
- Medium **(Auto-) create work order from item movement:** For prep, etc. work flows
- Medium **Automatically change service status through item movement processes:** For preparation, etc.
- Medium **Movement → service location → auto-create WO:** Moving a rental item to a service location should optionally auto-create a Field Service work order.
- Medium **Damage decision code workflow:** When a damage decision code is set on a movement, it should trigger automated follow-on actions (e.g., move to service location, create WO, set service status).
- Medium **Location automation:** Enable automatic change of location upon processing of item movement.
- Medium **Auto-assign item:** When adding a class to a contract an available unit should be automatically defaulted onto the contract for each line
- Low **Missing accessories auto-charge:** When movement return lacks tracked accessories, system should auto-flag for charges.
- N/A **Batch = New auto-set:** When creating a rental item via PO flow, batch status should default to "New" automatically. Users missing this causes downstream failures.
- N/A **Service status on item creation:** When a new rental item arrives, service status should auto-default to "Preparation needed" (or configurable) — not rely on manual set. **Potentially handled by enablement of item movements for POs and SOs**
- N/A **Work order for new equipment prep:** Auto-trigger a WO when a new rental item's service status indicates preparation needed. Currently no way to create a WO without a customer.
- N/A **Work order from movement record:** Should be able to create/link a work order directly from a movement record (currently only from contract line).
- N/A **WO completion → rental availability update:** When FS work order is completed, rental item availability should automatically update (remove service block).

#10

● Medium ▼

Field Service Integration Gaps

6 ▼

⋮

● Medium ▼

FS PO sync (Dual Write) status unclear: Does PO created in FS for work order parts still sync to F&O? FS WO → parts PO → delivery date → WO completion → rental availability chain needs to work end-to-end.

⋮

● Medium ▼

Insurance & Warranty not linked to rental item: FS warranty only links to FA, not rental item. Cost allocation (covered vs. uncovered labor/parts) not tracked against per-item P&L.

⋮

● Medium ▼

Internal service work without customer: Work orders currently require a customer. Internal prep/maintenance work is non-customer — needs to be supported.

⋮

● Medium ▼

ETA from work order on availability: WO expected completion date should surface in the rental item availability calendar.

⋮

● Low ▼

Inspection checklists ↔ FS inspection integration: Rental model-based inspection checklists should optionally trigger FS inspection templates. Regulatory inspection audit trails required for large customers.

⋮

● Low ▼

FS-ProjOps billing path: Is the intended path for billing damage/service work to a customer via FS + Proj Ops? If so, clarify the design decision.

#11

● Medium ▼

Pricing Gaps

3 ▼

⋮

● Medium ▼

Stepped pricing: Ability to configure stepped pricing.

⋮

● Medium ▼

No item-level pricing and discounting(only class-level): Workaround is unique class per item — causes class fragmentation at scale

⋮

● Medium ▼

Jobsite based pricing: Ability to use jobsite as a factor in pricing.

#12

● Medium ▼

Kitting / Packages

5 ▼

⋮

● Medium ▼

Package/kit concept in preview is incomplete — no mini-configurator (prime unit + bulk + accessories)

⋮

● Medium ▼

Pricing at package class level only; no association of specific items to a package

⋮

● Medium ▼

Movement must track individual kit components (for scanning at dispatch and return)

⋮

● Medium ▼

Damage tracking must work at component level within a kit

⋮

● Medium ▼

Package is currently tied to a Class, not specific items — unclear kit membership at runtime

#13

● Low ▼

UX / Usability Polish

3 ▼

- Medium **Movement status setup UX:** Not intuitive — both Lachlan and Robert flagged. Needs tooltips aligned with documentation.
- Low **Inspection checkbox hidden:** Completing inspection on a movement is buried in line details — not discoverable. Robert had to search to find it. Needs to be front-and-center.
- Low **Fleet transfer not launchable from Rental Item form:** Robert wants to start fleet transfer directly from the rental item — not from a separate menu form.

#14 Low Accessory Packs

4 ▼

- Medium Keys, safety cards, manuals, fuel guides, wheel chocks must go with equipment on every movement
- Medium No mechanism to track which accessories were dispatched on outbound or returned on inbound
- Medium Missing accessories on return should auto-flag and trigger charges
- Medium **Distinct from bulk attachments:** accessories are per-model standards, not separately purchased items

#15 Low Transportation Management

5 ▼

- Medium Blanket PO for carrier vs. per-load PO — blanket approach not supported
- Medium No mobile app for driver or external carrier (scan/count at point of delivery)
- Low **No paperwork generated from system:** no waybill, no hazmat documentation, no delivery receipt
- Low No weight/dimensions on rental item record (should come from released product)
- Low No routing/dispatch solution (ISV partner recommendation needed — acknowledge gap proactively)

#16 Critical Core Bugs / PP2 Quality Issues

12 ▼

- Medium [Bug 1143337 · P1] Inventory not updated + asset shows "not acquired" on New→Rental fleet transfer
- Medium [Bug 1141073 · P1] Error when transferring Rental → Used Fleet
- Medium [Bug 1141005 · P1] Hardcoded number sequence assumption on fleet transfer
- Medium [Bug 1142657 · P1] Physical status = "Ordered" (not "In stock") after PO receipt

- ☰ ☰ ☰ ● Medium ▾ [Bug 1143366 · P1] "Rental item availability" ≠ "Rental Item Availability summary" (inconsistency)
- ☰ ☰ ☰ ● Medium ▾ [Bug 1143411 · P1] Serial number doesn't appear on Rental Item forms even though it exists in inventory
- ☰ ☰ ☰ ● Medium ▾ [Bug 1143235 · P2] Fixed assets default view doesn't show rental items
- ☰ ☰ ☰ ● Medium ▾ [Bug 1143309 · P2] Default filter bug when assigning rental item to contract line
- ☰ ☰ ☰ ● Medium ▾ [Bug 1143343 · P2] Period codes error message misleading when >5 periods w/ Simulate Utilization
- ☰ ☰ ☰ ● Medium ▾ **[Bug 1143346 · P3] UX:** Rental Item tab confusing when creating a released product
- ☰ ☰ ☰ ● Medium ▾ [N/A · P1] Re-rents broken in current preview build (Benjamin confirmed WIP)
- ☰ ☰ ☰ ● Medium ▾ **Date/time override model:** Operations teams frequently enter data after-the-fact. System defaults to current time — SMU reading timestamp, movement record time, and return date all use system clock at entry. Needs configurable override.
